ELSEVIER

Comput. Methods Appl. Mech. Engrg. 148 (1997) 443–447

Computer methods in applied mechanics and engineering

Subject Index of Volume 148

Coupled problems

Simulation of Hot Isostatic Pressing of a powder metal component with an internal core, A. Svoboda, H.-Å. Häggblad and L. Karlsson 299–314

Dynamics

Parametric instability of spinning pretwisted beams subjected to spin speed perturbation, T.H. Tan, H.P. Lee and G.S.B. Leng 139–164

Elasticity

Parametric instability of spinning pretwisted beams subjected to spin speed perturbation, T.H. Tan, H.P. Lee and G.S.B. Leng 139–164

A polygonal element approach to random heterogeneous media with rigid ellipses or elliptical voids, J. Zhang and N. Katsube 225–234

A material model for rubber-like polymers exhibiting plastic deformation: computational aspects and a comparison with experimental results, S. Reese and P. Wriggers 279–298

Analysis and adaptive modeling of highly heterogeneous elastic structures, J.T. Oden and T.I. Zohdi 367–391

Electromagnetic fields

A new interface condition in the non-overlapping domain decomposition method for the Maxwell equations, P. Collino, G. Delbue, P. Joly and A. Piacentini 195–207

Electronics

A polygonal element approach to random heterogeneous media with rigid ellipses or elliptical voids, J. Zhang and N. Katsube 225–234

Finite difference methods

Numerical solution for complete aircraft's subsonic-transonic-supersonic flow at high angles of attack, Q. E, G. Yang and F. Li 11– 21

Implicit time splitting for fourth-order parabolic equations, C.I. Christov, J. Pontes, D. Walgraef and M.G. Velarde 209–224

Finite element and matrix methods

A finite-strain finite element model for the pseudoelastic behavior of shape memory alloys, A. Masud, M. Panahandeh and F. Aurrichio 23– 37

Computational plasticity for composite structures based on mathematical homogenization: Theory and practice, J. Fish, K. Shek, M. Pandheeradi and M.S. Shephard 53– 73

A computational model for finite element analysis of the freeze-drying process, W.J. Mascarenhas, H.U. Akay and M.J. Pikal 105–124

A new interface condition in the non-overlapping domain decomposition method for the Maxwell equations, P. Collino, G. Delbue, P. Joly and A. Piacentini 195–207
A material model for rubber-like polymers exhibiting plastic deformation: computational aspects and a comparison with experimental results, S. Reese and P. Wriggers 279–298
Simulation of Hot Isostatic Pressing of a powder metal component with an internal core, A. Svoboda, H.-Å. Häggblad and L. Karlsson 299–314
An efficient formulation of integration algorithms for elastoplastic shell analysis based on layered finite element approach, J. Sorić, U. Montag and W.B. Krätzig 315–327
A domain-decomposition message-passing approach to transient viscous incompressible flow using explicit time integration, M.A. Christon 329–352
Unsteady separated turbulent flows computation with wall-laws and $k - \varepsilon$ model, B. Mohammadi and O. Pironneau 393–405

Fluid mechanics
An approximate method for the solution of a three-dimensional free boundary problem arising in hydraulics, A. Kharab 187–194
A domain-decomposition message-passing approach to transient viscous incompressible flow using explicit time integration, M.A. Christon 329–352
Unsteady separated turbulent flows computation with wall-laws and $k - \varepsilon$ model, B. Mohammadi and O. Pironneau 393–405

General Rayleigh–Ritz and Galerkin techniques
A polygonal element approach to random heterogeneous media with rigid ellipses or elliptical voids, J. Zhang and N. Katsube 225–234
Element-free Galerkin method: Convergence of the continuous and discontinuous shape functions, P. Krysl and T. Belytschko 257–277

Heat and diffusion
Implicit time splitting for fourth-order parabolic equations, C.I. Christov, J. Pontes, D. Walgraef and M.G. Velarde 209–224
Simulation of Hot Isostatic Pressing of a powder metal component with an internal core, A. Svoboda, H.-Å. Häggblad and L. Karlsson 299–314

Incompressible and near incompressible media
Existence of approximate solutions and error bounds for viscoelastic fluid flow: Characteristics method, J. Baranger and A. Machmoum 39– 52
A material model for rubber-like polymers exhibiting plastic deformation: computational aspects and a comparison with experimental results, S. Reese and P. Wriggers 279–298
A domain-decomposition message-passing approach to transient viscous incompressible flow using explicit time integration, M.A. Christon 329–352
Unsteady separated turbulent flows computation with wall-laws and $k - \varepsilon$ model, B. Mohammadi and O. Pironneau 393–405

Kinematics
Parametric instability of spinning pretwisted beams subjected to spin speed perturbation, T.H. Tan, H.P. Lee and G.S.B. Leng 139–164

Miscellaneous topics
A computational model for finite element analysis of the freeze-drying process, W.J. Mascarenhas, H.U. Akay and M.J. Pikal 105–124

Nonlinear dynamics of systems
Parametric instability of spinning pretwisted beams subjected to spin speed perturbation, T.H. Tan, H.P. Lee and G.S.B. Leng 139–164

Nonlinear mechanics
A finite-strain finite element model for the pseudoelastic behavior of shape memory alloys, A. Masud, M. Panahandeh and F. Aurrichio 23– 37
Existence of approximate solutions and error bounds for viscoelastic fluid flow: Characteristics method, J. Baranger and A. Machmoum 39– 52
Parametric instability of spinning pretwisted beams subjected to spin speed perturbation, T.H. Tan, H.P. Lee and G.S.B. Leng 139–164
A material model for rubber-like polymers exhibiting plastic deformation: computational aspects and a comparison with experimental results, S. Reese and P. Wriggers 279–298
Simulation of Hot Isostatic Pressing of a powder metal component with an internal core, A. Svoboda, H.-Å. Häggblad and L. Karlsson 299–314

Numerical solution procedures
A finite-strain finite element model for the pseudoelastic behavior of shape memory alloys, A. Masud, M. Panahandeh and F. Aurrichio 23– 37
Parallel solution techniques in computational structural mechanics, S. Bitzarakis, M. Papadrakakis and A. Kotsopulos 75–104
A computational model for finite element analysis of the freeze-drying process, W.J. Mascarenhas, H.U. Akay and M.J. Pikal 105–124
Generating parametrizations of wing geometries using partial differential equations, M.I.G. Bloor and M.J. Wilson 125–138
A new interface condition in the non-overlapping domain decomposition method for the Maxwell equations, P. Collino, G. Delbue, P. Joly and A. Piacentini 195–207
Element-free Galerkin method: Convergence of the continuous and discontinuous shape functions, P. Krysl and T. Belytschko 257–277
An efficient formulation of integration algorithms for elastoplastic shell analysis based on layered finite element approach, J. Sorić, U. Montag and W.B. Krätzig 315–327

Plasticity
A finite-strain finite element model for the pseudoelastic behavior of shape memory alloys, A. Masud, M. Panahandeh and F. Aurrichio 23– 37
Computational plasticity for composite structures based on mathematical homogenization: Theory and practice, J. Fish, K. Shek, M. Pandheeradi and M.S. Shephard 53– 73
A material model for rubber-like polymers exhibiting plastic deformation: computational aspects and a comparison with experimental results, S. Reese and P. Wriggers 279–298
An efficient formulation of integration algorithms for elastoplastic shell analysis based on layered finite element approach, J. Sorić, U. Montag and W.B. Krätzig 315–327

Problems in physics
Implicit time splitting for fourth-order parabolic equations, C.I. Christov, J. Pontes, D. Walgraef and M.G. Velarde 209–224

Shells and plates
Influence of in-plane restraint on the buckling behaviour of plates under uniform compression, shear and in-plane bending, O.K. Bedair 1– 10

Postbuckling of laminated composite and sandwich plates and shells: On the significance of the fulfillment of static interlayer continuity conditions, L. Librescu, W. Lin, M. DiSciuva, U. Icardi 165–186
An efficient formulation of integration algorithms for elastoplastic shell analysis based on layered finite element approach, J. Sorić, U. Montag and W.B. Krätzig 315–327

Solutions of ordinary and partial differential equations
Generating parametrizations of wing geometries using partial differential equations, M.I.G. Bloor and M.J. Wilson 125–138
A new interface condition in the non-overlapping domain decomposition method for the Maxwell equations, P. Collino, G. Delbue, P. Joly and A. Piacentini 195–207

Spline approximation
Generating parametrizations of wing geometries using partial differential equations, M.I.G. Bloor and M.J. Wilson 125–138

Stability in structural mechanics
Influence of in-plane restraint on the buckling behaviour of plates under uniform compression, shear and in-plane bending, O.K. Bedair 1– 10
Postbuckling of laminated composite and sandwich plates and shells: On the significance of the fulfillment of static interlayer continuity conditions, L. Librescu, W. Lin, M. DiSciuva, U. Icardi 165–186

Structural mechanics
Parallel solution techniques in computational structural mechanics, S. Bitzarakis, M. Papadrakakis and A. Kotsopulos 75–104
Parametric instability of spinning pretwisted beams subjected to spin speed perturbation, T.H. Tan, H.P. Lee and G.S.B. Leng 139–164
Postbuckling of laminated composite and sandwich plates and shells: On the significance of the fulfillment of static interlayer continuity conditions, L. Librescu, W. Lin, M. DiSciuva, U. Icardi 165–186
Analysis and adaptive modeling of highly heterogeneous elastic structures, J.T. Oden and T.I. Zohdi 367–391

Subsonic flow
Numerical solution for complete aircraft's subsonic-transonic-supersonic flow at high angles of attack, Q. E, G. Yang and F. Li 11– 21

Supersonic flow
Numerical solution for complete aircraft's subsonic-transonic-supersonic flow at high angles of attack, Q. E, G. Yang and F. Li 11– 21

Systems of linear and nonlinear simultaneous equations
Parallel solution techniques in computational structural mechanics, S. Bitzarakis, M. Papadrakakis and A. Kotsopulos 75–104

Transonic flow
Numerical solution for complete aircraft's subsonic-transonic-supersonic flow at high angles of attack, Q. E, G. Yang and F. Li 11– 21

Turbulence
An approximate method for the solution of a three-dimensional free boundary problem arising in hydraulics, A. Kharab 187–194
Unsteady separated turbulent flows computation with wall-laws and $k - \varepsilon$ model, B. Mohammadi and O. Pironneau 393–405

Viscoelastic and viscoplastic media
Existence of approximate solutions and error bounds for viscoelastic fluid flow: Characteristics method, J. Baranger and A. Machmoum 39– 52
Simulation of Hot Isostatic Pressing of a powder metal component with an internal core, A. Svoboda, H.-Å. Häggblad and L. Karlsson 299–314

Viscous flow
A domain-decomposition message-passing approach to transient viscous incompressible flow using explicit time integration, M.A. Christon 329–352
Unsteady separated turbulent flows computation with wall-laws and $k - \varepsilon$ model, B. Mohammadi and O. Pironneau 393–405
